<b>SYSTEM</b>	Application of SCP-743, ShieldPrime UNI, ShieldProof 110 to 1.5mm and ShieldTop PU 300microns
<b>DATE</b>	2021

### Description

Miracle Wash Laundromat contacted ShieldCrete® to find a solution that waterproofed their flooring while also complying with all government regulations as they undergo regular inspections.

As an industrial launder, their flooring needs to last a long time while under conditions that concrete does not enjoy, while also being easy to clean on a regular basis, non-slip and able to withstand the wear of trollies.

Within two days of the initial concrete pour, our applicators were on site applying ShieldSeal SCP-743/P3 to the floor and internal walls (115m<sup>2</sup>). After this, our team returned later to prepare the floor for application, applied ShieldPrime UNI and 2 coats of ShieldProof 110 to 1.5mm to the floor and washtubs.

After the application cured, ShieldProof 115 was applied as a top coat to the floor and washtubs at 300microns.

This application provided Miracle Wash with a fully waterproof flooring system that is easy to clean and maintain.
